Test Property	Test Method	Test Principle / Requirements	Test Result
Front Stability	SGS In-house Method	The sample shall be obstructed by 1in. bar placed against the sample's front support members. A downward pulling force is ten applied at an angle of 45 to the test platform until the sample tips forward. The tipping force shall not be less than 40% of the total sample weights.	PASS Weight: 2.3 kg Required force: 9 N Tipping over force: 15 N
Rearward stability	SGS In-house Method	Min. 30lbs. pulling force when a 173 lbs. weight is placed on the seat(strap), tipping force is measured as pulled reward against 1 in. obstruction.	PASS Tipping over force > 30 lbs.
Seating-seat static load	SGS In-house Method	No structural failure under 250 lbs compression x 1.2 times for 24 hours.	PASS Test load: 300 lbs

Remark:

When statement of conformity is made, unless the decision rule was mentioned in above specified test items, the decision rule would be based on the non-binary statement with guard band (is equal to the expanded measurement uncertainty with a 95% coverage probability, $w = U_{95}$) in ILAC-G8:09/2019 Clause 4.2.3.

“Pass - the measured value is within (or below / above) the acceptance limit, where the acceptance limit is below / above to the guard band.” or “Pass - The measured values were observed in tolerance at the points tested. The specific false accept risk is up to 2.5%.”.

“Fail - the measured value is out of (or below / above) the tolerance limit added / subtracted to the guard band.” or “Fail - One or more measured values were observed out of tolerance at the points tested”. The specific false reject risk is up to 2.5%.

“Inconclusive – It is not possible to state the conformity. Either one or more measured values were observed in the portion of the expanded measurement uncertainty intervals at the points tested where the specific risk is up to 50%.”
